

himself₂₇ Exfoliate 50ml

Natural bamboo, jojoba beads, crushed almonds top a list of fabulously exotic ingredients. Used 2 or 3 times a week, himself₂₇ exfoliate will help keep your skin looking fresh and radiant by gently removing dead skin cells and stimulate regeneration.

It will help to dislodge ingrown hairs from beneath the upper layers, help unclog pores and reduce the development and appearance of acne affected or blemished skin.

Active ingredients;

Jojoba beads. Facial polish

Rosehip oil. Emollient / skin conditioning

Bamboo powder. Abrasive

Almond oil. skin conditioning / abrasive / bulking / moisturising

Ingredients:

Preservative content below is approved by the Soils Association

Phenoxyethanol is an organic chemical compound, a glycol ether often used in dermatological products such as skin creams. It is a colourless, oily liquid. It is a bactericide also used as a fixative for perfumes, an insect repellent, a topical antiseptic, used in preservatives, pharmaceuticals, and in organic synthesis. It is moderately soluble in water. It is also listed as an ingredient for many United States vaccines by the Centre for Disease Control.

Benzyl alcohol is an organic compound. Benzyl alcohol is a colourless liquid with a mild, pleasant, aromatic odour. It is a natural constituent of a variety of essential oils including jasmine, hyacinth, and ylang-ylang.

Potassium sorbate is the potassium salt of sorbic acid. It is used to inhibit moulds, yeasts and microbes. It can be found in the ingredients list of many herbal dietary supplement products and is used in quantities at which there are no known adverse health effects. Also, it is used in many personal care products to inhibit the development of microorganisms for shelf stability. Some manufacturers are using this preservative as a replacement for parabens.
