

# himself<sub>27</sub> Eye Treatment 15ml

This Cooling Eye treatment gel contains anti-oxidants and botanical extracts. It helps to reduce puffiness and discolouration, restore elasticity, balance and firmness, to tired stressed eyes. Light reflecting technology helps to reduce appearance of fine lines.

Avoiding direct contact with the eye, apply Eye Gel to cleansed skin. Dispense approximately a 4mm diameter "gel ball" onto finger. Gently pat around the orbital and brow bone towards the nose. Be careful not to pull at the skin. Leave for 10 to 15 minutes then remove any excess with a little water.

## **Active ingredients;**

**Royal jelly.** Skin conditioning

**Vitamin K.** Skin conditioning

**Fennel oil.** Tonic / emollient / soothing / skin conditioning

**Green tea.** Anti-oxidant

**Preservative content** below is approved by the Soils Association

Phenoxyethanol is an organic chemical compound, a glycol ether often used in dermatological products such as skin creams. It is a colourless, oily liquid. It is a bactericide also used as a fixative for perfumes, an insect repellent, a topical antiseptic, used in preservatives, pharmaceuticals, and in organic synthesis. It is moderately soluble in water. It is also listed as an ingredient for many United States vaccines by the Centre for Disease Control.

Benzyl alcohol is an organic compound. Benzyl alcohol is a colourless liquid with a mild, pleasant, aromatic odour. It is a natural constituent of a variety of essential oils including jasmine, hyacinth, and ylang-ylang.

Potassium sorbate is the potassium salt of sorbic acid. It is used to inhibit moulds, yeasts and microbes. It can be found in the ingredients list of many herbal dietary supplement products and is used in quantities at which there are no known adverse health effects. Also, it is used in many personal care products to inhibit the development of microorganisms for shelf stability. Some manufacturers are using this preservative as a replacement for parabens.
